

# Mark Scheme (Results)

Summer 2025

Pearson Edexcel GCSE  
In Biology (1BI0)  
Paper 2H

## **Edexcel and BTEC Qualifications**

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at [www.edexcel.com](http://www.edexcel.com) or [www.btec.co.uk](http://www.btec.co.uk). Alternatively, you can get in touch with us using the details on our contact us page at [www.edexcel.com/contactus](http://www.edexcel.com/contactus).

## **Pearson: helping people progress, everywhere**

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: [www.pearson.com/uk](http://www.pearson.com/uk)

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

Mark schemes have been developed so that the rubrics of each mark scheme reflects the characteristics of the skills within the AO being targeted and the requirements of the command word. So for example the command word 'Explain' requires an identification of a point and then reasoning/justification of the point. Explain questions can be asked across all AOs. The distinction comes whether the identification is via a judgment made to reach a conclusion, or, making a point through application of knowledge to reason/justify the point made through application of understanding. It is the combination and linkage of the marking points that is needed to gain full marks.

When marking questions with a 'describe' or 'explain' command word, the detailed marking guidance below should be consulted to ensure consistency of marking.

| Assessment Objective |           | Command Word                                                                                                                    |                                                                                                                                         |
|----------------------|-----------|---------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| Strand               | Element   | Describe                                                                                                                        | Explain                                                                                                                                 |
| AO1                  |           | An answer that combines the marking points to provide a logical description                                                     | An explanation that links identification of a point with reasoning/justification(s) as required                                         |
| AO2                  |           | An answer that combines the marking points to provide a logical description, showing application of knowledge and understanding | An explanation that links identification of a point (by applying knowledge) with reasoning/justification (application of understanding) |
| AO3                  | 1a and 1b | An answer that combines points of interpretation/evaluation to provide a logical description                                    |                                                                                                                                         |
| AO3                  | 2a and 2b |                                                                                                                                 | An explanation that combines identification via a judgment to reach a conclusion via justification/reasoning                            |
| AO3                  | 3a        | An answer that combines the marking points to provide a logical description of the plan/method/experiment                       |                                                                                                                                         |
| AO3                  | 3b        |                                                                                                                                 | An explanation that combines identifying an improvement of the experimental procedure with a linked justification/reasoning             |

**Biology 1BI0\_2H**

| Question number | Answer                                                                                                                                                     | Mark       |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>1(a)</b>     | A description including: <ul style="list-style-type: none"><li>• use iodine (1)</li><li>• (if the banana turns) blue-black starch is present (1)</li></ul> | <b>(2)</b> |

| Question number | Answer                                                                                                                                                                                                          | Additional guidance                               | Mark       |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------|------------|
| <b>1(b)</b>     | A description including: <ul style="list-style-type: none"><li>• use Benedict's reagent (1)</li><li>• <b>heat</b> the sample (with Benedict's reagent) (1)</li><li>• the sample turns (brick) red (1)</li></ul> | <b>accept</b> yellow, green, orange for brick red | <b>(3)</b> |

| Question number | Answer                                                                                                                                                                     | Mark       |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>1(c)</b>     | An explanation including <b>two</b> from: <ul style="list-style-type: none"><li>• (as bananas ripen) starch is converted to glucose (1)</li><li>• by enzymes (1)</li></ul> | <b>(2)</b> |

**Total for Question 1 = 7 marks**

| Question number | Answer                                                                                                                                                                                                                                                                      | Additional guidance                                                                                         | Mark       |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|------------|
| <b>2(a)</b>     | <p>A description including:</p> <ul style="list-style-type: none"> <li>• (pathogens) get stuck in the mucus (1)</li> <li>• <b>cilia</b> {move / waft} the {pathogens / mucus} (1)</li> <li>• to the throat / up the {trachea / bronchiole} / to be swallowed (1)</li> </ul> | <p>accept micro-organisms for pathogens</p> <p>accept hairs for cilia</p> <p>accept away from the lungs</p> | <b>(2)</b> |

| Question number | Answer                                                                                                                                                                                                                                                             | Additional guidance                                                                                                                                     | Mark       |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>2(b)</b>     | <p>An explanation linking two from:</p> <ul style="list-style-type: none"> <li>• glucose and oxygen (1)</li> <li>• (to form) carbon dioxide and water (1)</li> <li>• in an exothermic reaction (1)</li> <li>• which takes place in the mitochondria (1)</li> </ul> | <p>accept <math>C_6H_{12}O_6 + O_2</math></p> <p>accept <math>CO_2 + H_2O</math></p> <p>accept correct equation for aerobic respiration for 2 marks</p> | <b>(2)</b> |

| Question number | Answer                       | Additional guidance | Mark       |
|-----------------|------------------------------|---------------------|------------|
| <b>2(c) (i)</b> | to absorb the carbon dioxide | accept $CO_2$       | <b>(1)</b> |

| Question number | Answer                                                                            | Mark |
|-----------------|-----------------------------------------------------------------------------------|------|
| 2(c) (ii)       |  | (1)  |

| Question number | Answer                                                                                                                                                                                                                                          | Additional guidance                              | Mark |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------|------|
| 2(c)(iii)       | <p>An explanation linking two from:</p> <ul style="list-style-type: none"> <li>• (the drop) would move more slowly / shorter distance (1)</li> <li>• as less oxygen would be used (1)</li> <li>• so less respiration would occur (1)</li> </ul> | accept less carbon dioxide {produced / absorbed} | (2)  |

| Question number | Answer                                      | Mark |
|-----------------|---------------------------------------------|------|
| 2(c)(iv)        | repeat the investigation / calculate a mean | (1)  |

**Total for Question 2 = 9 marks**

| Question number | Answer                                                  | Mark |
|-----------------|---------------------------------------------------------|------|
| 3(a) (i)        | native (species) / (species) from the country of origin | (1)  |

| Question number | Answer                               | Additional guidance                    | Mark |
|-----------------|--------------------------------------|----------------------------------------|------|
| 3(a)(ii)        | quadrat / stated size of square area | accept {belt / line} transect / a grid | (1)  |

| Question number | Answer                      | Mark |
|-----------------|-----------------------------|------|
| 3(b)(i)         | increases / goes up / rises | (1)  |

| Question number | Answer                                                                                                                                                                                                                                                                                                                | Additional guidance | Mark |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|------|
| 3(b)(ii)        | <p>The only correct answer is <b>B</b> species C</p> <p>A is incorrect because Species A is decreasing so will not out-compete</p> <p>C is incorrect because species D has only increased by 2 so will not out-compete B</p> <p>D is incorrect because species H is not present so will not out-compete species B</p> |                     | (1)  |

| Question number | Answer                                                                                                                                                                                                                    | Additional guidance                                                                                                                                             | Mark |
|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| 3(b)(iii)       | <p>An explanation linking:</p> <ul style="list-style-type: none"> <li>taller / bigger / had larger leaves / had larger roots (1)</li> <li>(got more) water / minerals / nutrients / light / photosynthesis (1)</li> </ul> | <p>ORA</p> <p>accept grows / reproduces / takes up more space / higher population</p> <p>accept named minerals</p> <p>accept disease / eaten by animals (1)</p> | (2)  |

| Question number | Answer                                                                                                        | Mark |
|-----------------|---------------------------------------------------------------------------------------------------------------|------|
| 3(b)(iv)        | (seeds) blown in by the wind / (seeds) brought in by animals / {roots / shoots} <b>growing</b> under the wall | (1)  |

| Question number | Answer                                                                                                                                                                                                                                                                                                       | Additional guidance                                                                     | Mark |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|------|
| 3(c)            | <p>An explanation including two from:</p> <ul style="list-style-type: none"> <li>• through the root (hair cells) (1)</li> <li>• by <b>osmosis</b> (1)</li> <li>• across the {semi / partially} permeable membrane (1)</li> <li>• from a high water concentration to a low water concentration (1)</li> </ul> | accept down a concentration gradient / from high water potential to low water potential | (2)  |

**Total for Question 3 = 9 marks**

| Question number | Answer                                                                                                                                                                | Additional guidance                                                                                                                                                                                                                                                            | Mark       |
